

# Lecture 4: The Great Transformation: A Heurististic Concept

Episode 2: Drivers of the Low-carbon Transformation

Prof. Dr. Dirk Messner Director of the German Development Institute/ Deutsches Institut für Entwicklungspolitik (DIE), Bonn (Germany)

Episode 1: Key characteristics of the Global Transformation towards sustainability

Episode 2: Drivers of the Low-carbon Transformation

Episode 3: Interview

#### **Learning Outcomes**

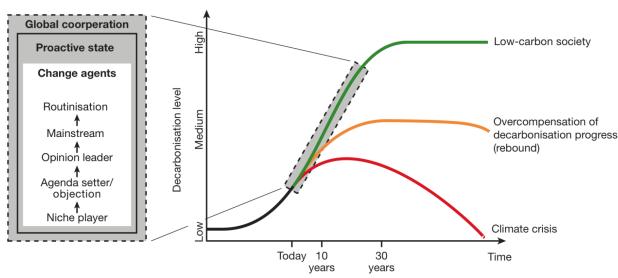

- 1. You will understand what "managing" a low-carbon transformation means.
- You will be able to differentiate different actors and their roles within transformations.
- 3. You will be able to explain the central terms of niches, socio-technical regimes, and co-evolution.
- 4. You will have an initial understanding of the social forces shaping a transformation.
- 5. You will be familiar with policy instruments to support the low-carbon transformation.

### Managing the transformation trajectory

Since the 1970s: "we do have a problem":

- "Limits to Growth"
- Rio 1992

Building a low-carbon society ... beyond policy reforms

### **Driving the transformation**

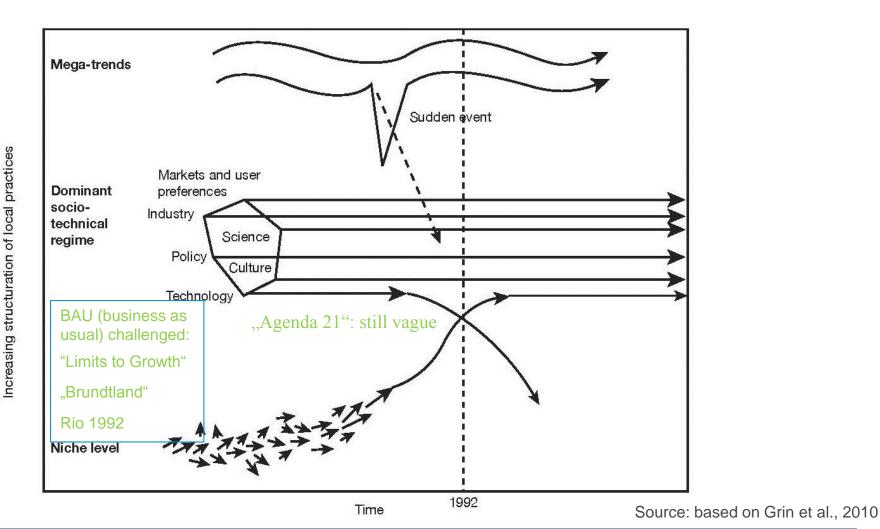

- scale: from pilots to systems and acceleration
- setting the course: long-term perspectives towards 2050 (roadmaps)
- from sector to system reforms (cities, mobility, energy, lifestyle)

# Rio 1992: Still an early stage of green transformation

#### **Managing the Transformation**

Co-evolution: Transformation driven by accumulation of multiple dynamics

→ Growing number of actors of change

→ Shifting norms values / heuristics

→ Policy regime

→ Green innovation

→ International context

II. Vision: low-carbon narrative

- legitimacy
- concepts
- power
- "it works" (finance, technologies)

I. Legitimacy of BAU eroding/BAU no option/tipping point constellations

Regime shifts "can occur when the system is pushed across some threshold by external and internal dynamics." (Ostrom et al. 2008) ... tipping point constellations

### Three Mechanisms Accelerating the Transformation

Arenas and drivers of transformation:

- 1. New narrative
- 2. Actors
- 3. Innovation
- 4. Policy regime
- International context
- 6. Shifting norms/ values

**Social contract** 

I. Legitimacy of BAU eroding

**Transformational** 

policies

examples

Low-carbon becoming the main driving force / new mainstream

II. Vision: low-carbon narrative

- Co-evolution interaction between 1-6
- mutual reinforcement
- from "critical masses" to accumulation of mutiple dynamics
- co-evolution strengthening lowcarbon: legitimacy – concepts – power alliances - "it works"

- scaling up
- acceleration
- global diffusion of low-carbon concepts

## Reversing high carbon: Ten bundles of instruments

- 1. Proactive/ enabling state
- Price for carbon
- 3. Regional energy cooperation
- Internationalize feed-in tariffs/ DESERTEC for Africa
- 5. Reduce energy poverty low-carbon
- Low-carbon urbanization
- 7. Low-carbon land use
- 8. Finance mechanisms and new business models
- Low-carbon research strategies/ knowledge gaps
- Global governance for the low-carbon transformation

polycentric strategy

focused strategy

#### **Exercises for self study**

- Niches and socio-technical regimes: try to understand both concepts and describe a niche that is relevant to a low-carbon transformation.
- Policy action: pick one of the instrument bundles and explain what must be done to effectively implement it.
- Explain the concept of the social contract.
